

Image Management Systems - IMS

The number of various uses for image galleries on the internet are constantly growing, with many now featuring Flash™ animations, administrator control panels, and user interactive features such as commenting, rating and even uploading their own photos. Lumis offers a variety of Image Management Systems, where website owners can administer as much or as little as they need to.

These IMS range from a traditional static gallery, to Flash™ animated galleries, rich with audio and visual functionality and configurations. Regardless of your image requirements, Lumis can tailor a package to suit you. For simple displays of products or images, Lumis can create a gallery for you with photos and descriptions. For multiple galleries, Lumis can setup and handle all your staff training.

Our range of Image Galleries and Management Systems include:

Static Photo Gallery:

Includes features allowing you to:

- supply the photos and Lumis can do the rest
- choose your gallery colours and layout
- choose thumbnail or a slideshow view
- allow visitors to download gallery images
- display a photo Name and Description

Gallery with Control Panel:

Includes features allowing you to:

- administer features via your control panel
- create multiple galleries with limited access
- limit access to galleries to members only
- add/edit/delete as many images as you like
- allow users to comment and rate photos

Advanced Galleries:

Includes features allowing you to:

- choose either a Flash™ or HTML gallery
- create multiple categories for galleries
- upload via integrated image control panel
- choose from many different configurations
- manage it all using only your web browser!
